Acoustics

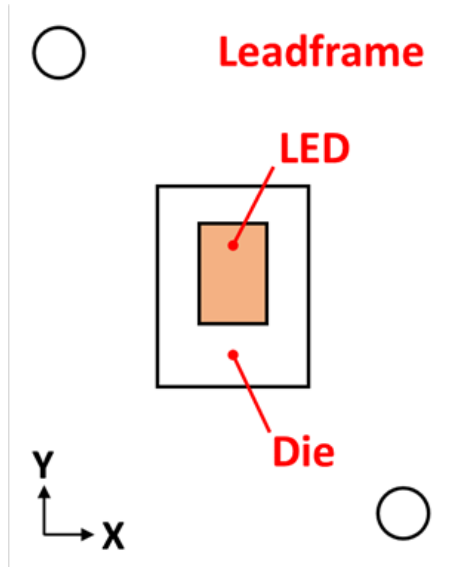

from the lab ...

... to the industry

Initial situation and motivation

Geometric tolerances

Compensation and Alignment

Reproducible optical characteristics

Higher productivity

Miniaturization and function integration

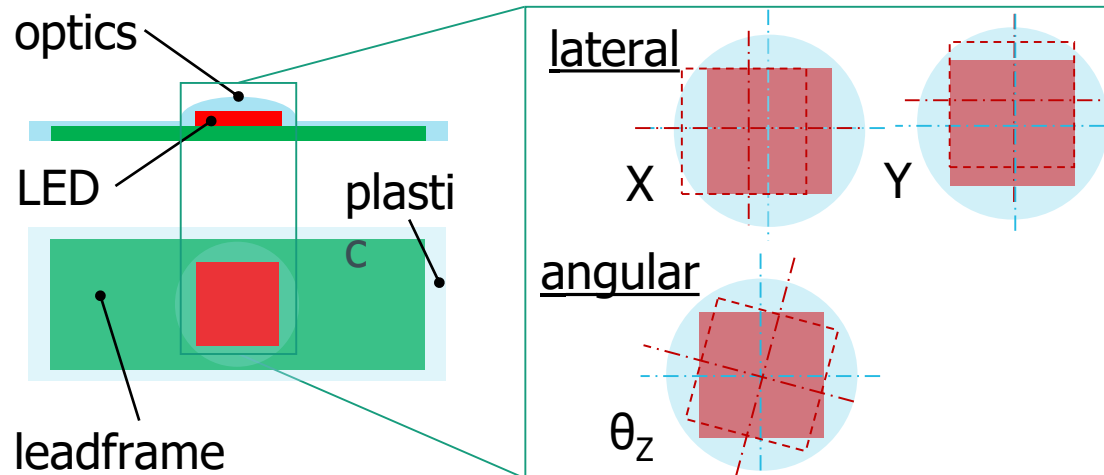

Initial situation and requirements

Requirement	Value
Max. translatory travel in both axes	min. 200 μm
Max. rotatory actuating angle	min. 0,5°
translational positioning accuracy	min. 0,1 μm
rotatory positioning accuracy	min. 0,006°

Requirements

Movement axes: $XY\theta_z$

Installation Space

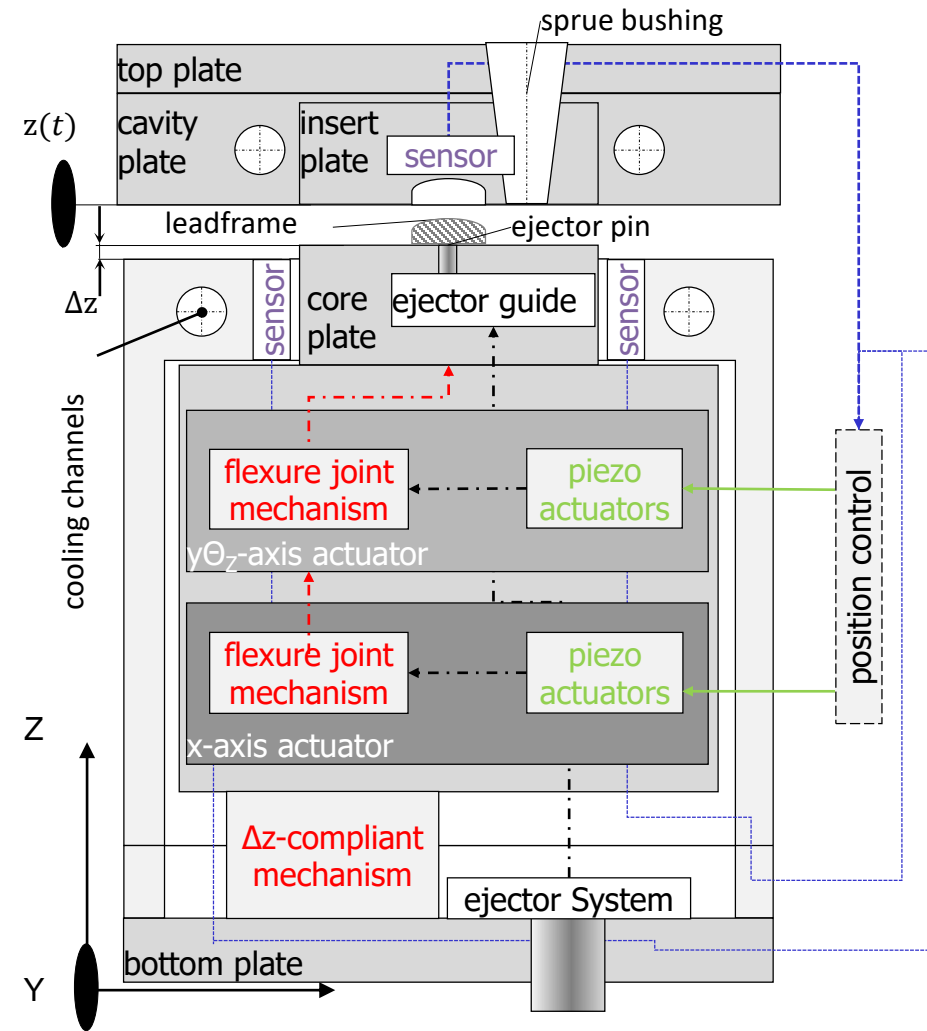

In-mould compensation system: Concept

Movement generated by piezo actuators

Movement transmitted by flexure joint mechanisms

- **Micro-Injection mould**
 - Vertical two-plate mould
 - Standard-components
- **High precision 3-DOF**
 - Integrated piezo-actuators
 - High precision flexure joint mechanisms
- **Measuring systems:**
 - 3 capacitive sensors on cavity plate

156x156x200 mm (l×w×h)

Structural OCT

Internal structural composition

Intensity-based OCT

Information on:

- Structural composition / interfaces
- Defects (e.g. micro-cracks)
- Delamination or inclusions

Functional OCT

e.g. Polarization- Sensitive OCT

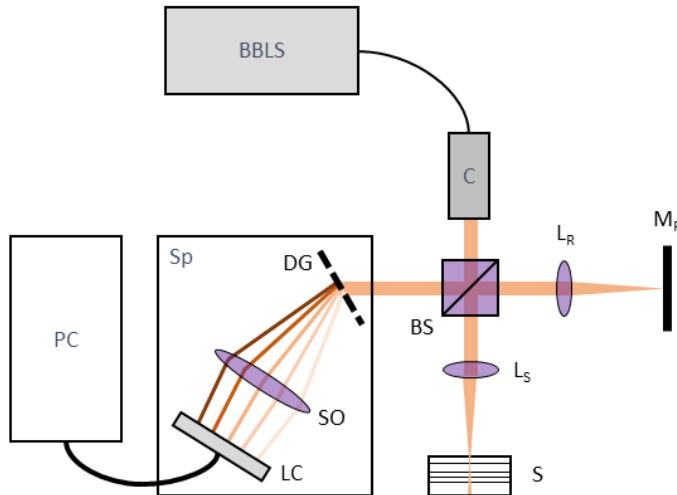

Reflectivity Retardation optical Axis

Phase-based OCT

Information on:

- Optical Anisotropies
- Internal stresses in polymers
- Local reflective index changes

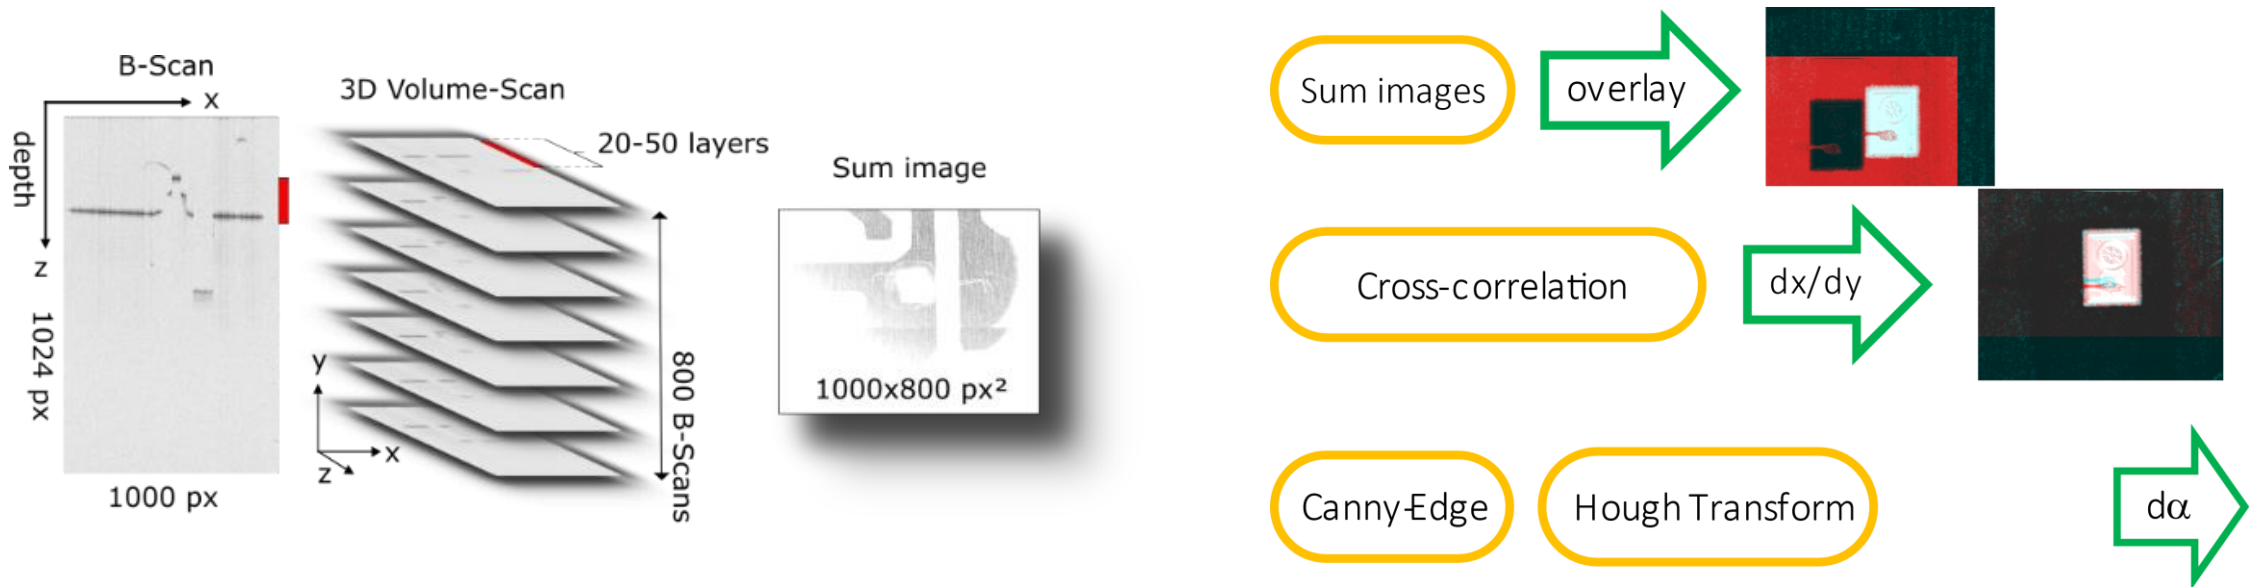

Specification	
Axial resolution, Δz (μm)	10
Lateral resolution, Δx (μm)	< 20
Depth scan area (mm)	4.2
Lateral scan area (mm \times mm)	6 \times 6
B-scan rate (Hz)	80

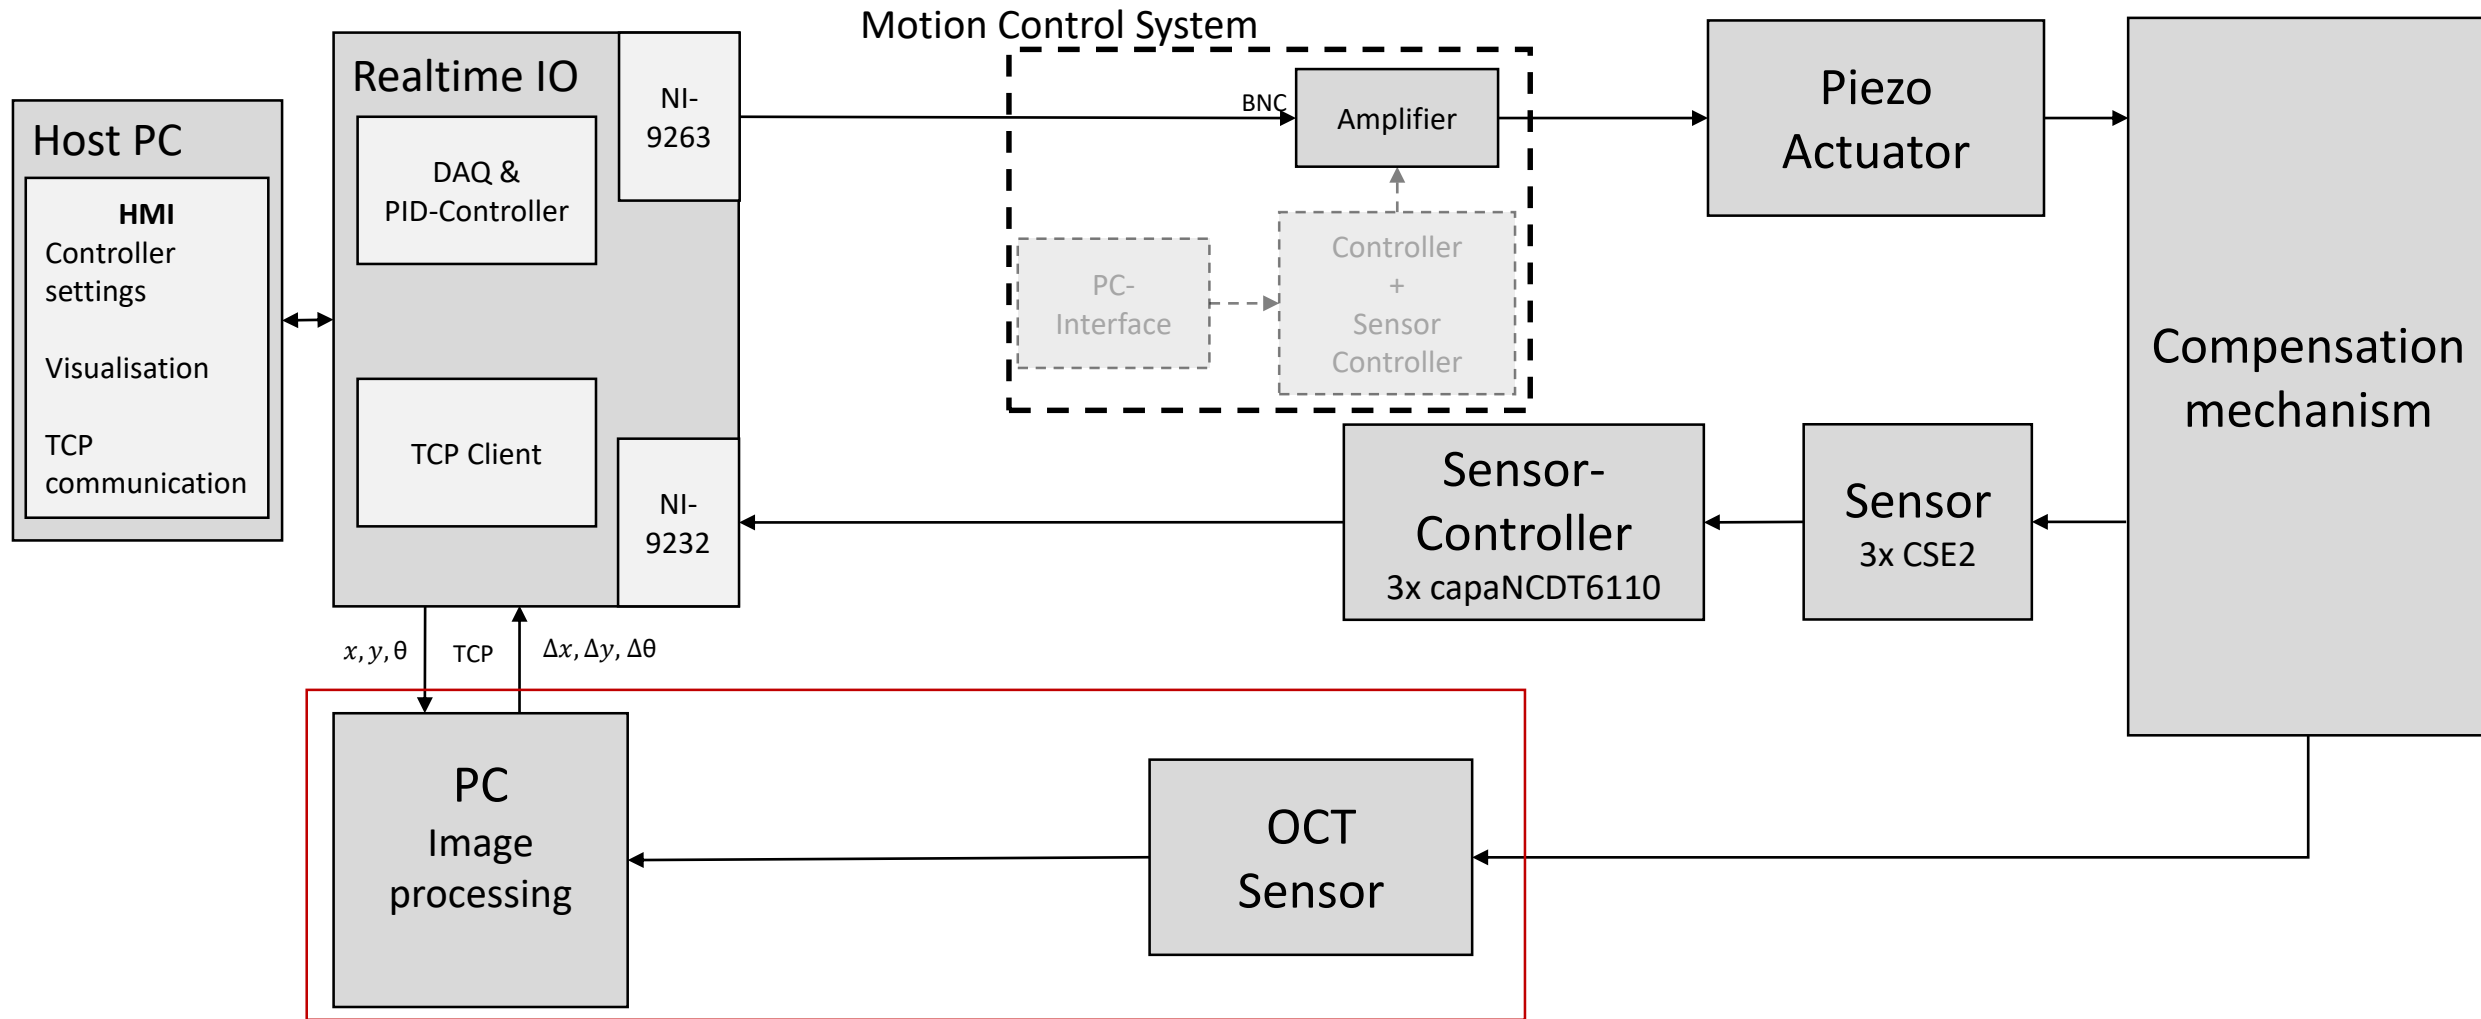

In mould process monitoring: design

In mould process monitoring: image processing

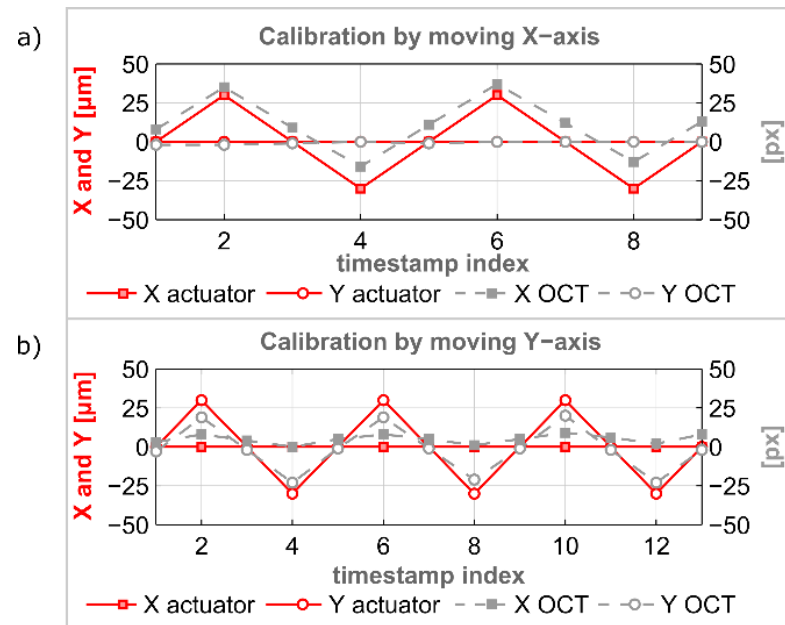

Compensation and alignment system

Coordinate System calibration

$$\begin{pmatrix} x \\ y \end{pmatrix}_{OCT} = A \cdot \begin{pmatrix} x \\ y \end{pmatrix}_{actuator} = \begin{pmatrix} a_{11} & a_{12} \\ a_{21} & a_{22} \end{pmatrix} \cdot \begin{pmatrix} x \\ y \end{pmatrix}_{actuator}$$

$$\begin{pmatrix} x \\ y \end{pmatrix}_{actuator} = A^{-1} \cdot \begin{pmatrix} x \\ y \end{pmatrix}_{OCT} = B \cdot \begin{pmatrix} x \\ y \end{pmatrix}_{OCT}$$

Positioning accuracy

- Novel in-mould positioning system developed
- Correction detection based on OCT
- OCT has the potential for
 - pre-injection and
 - post-injectionproduct quality monitoring
